Java Knowledge

Courses in the Software Design and Architecture specialization present software designs applicable to a broad range of object-oriented programming languages; however, for examples and practice, this specialization will require some proficiency in Java.

What follows is a series of three Java "refresher" quizzes. While these quizzes are ungraded, they will test your familiarity with fundamental Java programming constructs that will be relevant to examples and tasks throughout the course.

If you find the first quiz challenging, we recommend reviewing Duke University's four week course: Java Programming: Solving Problems with Software.
